

ARCHITECTURAL COLOUR LIBRARY — V1.0

# The Colour Library

*Mineral-derived clay plaster colours, drawn from earth, stone and natural elements*

All colours are mixed into the Claywise® clay plaster base and are produced from natural mineral pigments. Colour presents differently across the four Lithos grades — texture, light and material movement are part of the finish. Approve a physical sample before final specification.

LIGHT MINERAL NEUTRALS

01 Mati Dune

02 Aroha Bone

03 Aroha Clay

04 Atla Mist

Bone — the natural, unpigmented tone of the clay itself — sits outside this library: it is the base every colour above is mixed into, and the most specified finish in the collection. Custom colours are developed to order for specified projects.

## COLOUR REPRESENTATION NOTICE

Claywise® colours are produced from natural mineral pigments and clay materials. Variation occurs with mineral source, substrate absorption, application method, texture grade, lighting conditions and monitor calibration. Digital representations, printed brochures and photography are indicative only and are not a substitute for a physical sample. Claywise strongly recommends approval of a physical project sample, prepared by an accredited Claywise® installer, prior to final specification, procurement or sign-off.

*Final appearance may vary between Earth Plaster, Cruda, Terra and Lumen grades due to texture profile, light reflection and the material movement inherent to mineral finishes.*

The physical colour library, on archival stock, ships with the Claywise Sample Box — [claywise.com.au](https://claywise.com.au).
